

STANDARD MEDICAL RESPONSE LETTERS

*Faster production, built for
your workflows, and
documented*

OVERVIEW

Standard Response Letters (SRLs), FAQs, and other Scientific Response Documents are among the highest-risk places to introduce AI. Generic tools can hallucinate and cite sources that don't exist.

Qoniq's framework accelerates the labor-intensive parts of document creation without compromising scientific accuracy, compliance, or the non-promotional standards Medical Information and Medical Communications teams are held to.

Qoniq

What Qoniq Delivers:

1 Authoring & Updating

- Researches, drafts, and updates SRLs, FAQs, and Scientific Response Documents
- Fully referenced, scientifically rigorous, and regulatory-aligned
- Custom responses for complex or off-label inquiries
- Every claim tied to a source; eliminating the need for manual citation verification

2 Literature Surveillance & Evidence Synthesis

- Continuously monitors new publications, trial updates, safety data, and guidelines
- Synthesizes complex data into clear, fair, and balanced content
- Flags new publications that contradict or update existing documents automatically
- "Evolving Consensus" reports highlight exactly what shifted, with no re-reading of every study at each review cycle

3 Quality Assurance & Regulatory Alignment

- Applies best practices in medical writing, document control, and versioning
- Ensures responses meet regulatory guidelines

THE RESULT: ●●●●●●●●

Your Medical Information and Medical Communications teams spend less time on the mechanics of writing and more time on scientific strategy, ensuring every response effectively answers the healthcare provider's specific clinical question.
